

# Front-end Developer Kit

Datadog's essential toolkit for front-end developers.

## Thanks for downloading our Front-end Developer Kit!

The resources below are meant to serve as a toolkit to assist developers in better understanding user activity and troubleshooting front-end issues as efficiently as possible.

### THIS KIT CONTAINS:

- **2 Best Practices Guides**, each detailing key methods to improve upon your existing front-end monitoring and testing strategies.
- **A Synthetic Monitoring x APM Solutions Brief**, which describes how you can catch and resolve issues proactively—before they have a chance to impact your customers.
- **An On-Demand Webinar**, so you can learn how to reduce MTTR for critical application issues with unified front-end and back-end performance data.

### Front-end Monitoring Best Practices Guide

Learn how to apply front-end monitoring best practices.
